

Dear Future AMOS Generation,

Welcome to the AMOS project! As a team, we want to share our experiences—what worked well and what challenges we faced—to help you make the most of your journey.

What You Should Continue Doing:

- **Maintain Strong Collaboration:** The **Software Developers (SDs)** did a fantastic job delivering high-quality software consistently, and the **Product Owners (POs)** provided great leadership and clear communication. Keeping this teamwork strong will be key to your success.
- **Use Additional Meetings Wisely:** Extra meetings, especially in the early weeks, helped align expectations and clarify goals. Continue using them to ensure everyone is on the same page.
- **Engage Actively in Communication Channels:** Quick and frequent responses in Slack or other tools kept our workflow smooth and resolved issues faster.
- **Familiarize Yourself with the Project Structure Early:** Understanding the overall architecture from the beginning will make development and handling pull requests more efficient.
- **Follow Agile Practices Effectively:** Scrum will help maintain structure and momentum.
- **Foster a Positive and Supportive Environment:** A collaborative mindset helped us deliver what was promised while keeping motivation high.

What You Should Improve On:

- **Strengthen Communication with your industry partner:** Be proactive in engaging with your IP to clarify expectations early and frequently.
- **Incorporate Pair Programming:** This will enhance code quality and knowledge sharing among team members.
- **Balance Workloads More Evenly:** At times, workload distribution was uneven, leading to engagement issues. Attempt to maintain even task distribution throughout each sprint.

By building on these strengths and addressing these areas, your team will have a productive and rewarding experience. Best of luck with your project!

Sincerely,

Team 1 WS 24/45
